

Representatives of the Management Body of the State Emergency Service of Ukraine met with the management of the mining enterprise to agree on an Accident Elimination Plan (AEP).

For high-risk areas where industry operates, an AEP is not just a formal report. It is the basis of safety, a document that guarantees the preservation of human lives and minimizing the consequences of emergencies.

The key goal of the AEP: To ensure readiness for an instant response in production, where every second decides the fate of a person or object.

It is the AEP that turns potential chaos into a clearly worked out rescue mechanism. This is our protective shield!
